OVERVIEW

About Us

Safelyio was created by Happen Group LLC, a USA-based company that mainly focuses on working as a consultant with organizations that value their employees' health and safety. Happen Group develops its software, Environmental Health and Safety training, plus provides custom training and "White Glove" enterprise solutions to its customers.

Our organization comprises Board-Certified Safety Professionals, OSHA Outreach Trainers, insurance consultants, software engineers, and other subject matter experts with over 30 years of experience in occupational safety and health. Whether your organization needs onsite safety audits, a comprehensive Health and Safety Program, risk analysis, training material, onsite safety training, or training software, we are here to help.

Safelyio Provides

Experience all the benefits of a software enterprise solution for providing consistent and detailed safety toolbox talks and other safety policy information to your employees all at once. A low-cost automated solution to a pain point to many companies seeking a solution for providing consistent and relevant safety toolbox talks to their employees.

Safelyio offers plans, affordable pricing, and customization, allowing organizations to create their own toolbox talks or choose from a library with over a hundred toolbox talks that come in text, video, or audio format. A toolbox talk solution uniquely tailored to your needs. Increase employee safety and productivity and avoid the lengthy and ineffective toolbox talks tailgate meetings that are ineffective.

Save on training costs, improve your safety record, increase employee engagement, and enhance your regulatory compliance with our customized enterprise solution.

Automated

If you oversee toolbox talks for your company, then you know the old pen and paper method is time-consuming and labor-intensive and, over time, accumulates too many paper documents that you must maintain and record. That is where Safelyio comes in and automates the entire process.

Manage Toolbox Talk

Create, schedule, and manage toolbox talks for different teams. Toolbox talks can be scheduled to be sent days, weeks or months in advance, completely automated.

Easy To Use Learning Management

STREAMLINE TOOLBOX TALK DELIVERY

Every Safelyio Enterprise Solution account includes a robust and fully integrated Learning Management System (LMS) providing a full set of features to assist organizations in streamlining their safety initiatives and minimal cost. The LMS schedules training, tracks completion date and time, quiz scores, and a host of additional information that is readily available for download.

FEATURES

- Text (SMS) and Email Content Delivery
- Automatic Course Assigning
- Upload Your Own Safety Content
- Customize Reports
- Training Track
- Custom Campaign Creations
- Eliminates the Need for Paper Copies
- Dedicated Account for Each Employee

TOOLBOX FORMATS

Video

Video based toolbox talks promote greater employee engagement. Video based tool box talks are presented with and without voice overs. This format conveys large amount of information in a short amount of time.

Circular/Skill Saw Safety

Circular saws are the most frequently used wood-cutting tools in the carpentry trade. Although the circular saw is equipped with an upper and lower guard, the blade becomes exposed when the saw is pushed into the workpiece. This exposed portion of the blade can lead to severe injuries such as amputations. Safe work practices should always be used when operating these devices.

Point of Operation Hazards:

- Injuries can occur if you misuse the tool. For instance, forcing the tool to cut the material. Forcing the tool can cause it to bind the blade and can cause kickback.
- Injuries can also occur when two hands are not used to control the saw while in operation. If you have two hands on the saw, there is no risk of injury.
- . Reaching underneath the workpiece and holding the material being cut in your hands can
- Not using sawhorse or workbench to cut materials.
- Kickbacks. A kickback is a sudden reaction to a pinched, bound, or misaligned saw blade, causing an uncontrolled saw to lift up and out of the workpiece toward the operator Kickbacks can occur because:
 - The blade depth is set incorrectly.

Text

Choose form over a hundred tool box topics in word format. Our program allows clients to load their own talks o we can create custom toolbox talks for any activity.
